Credentialate

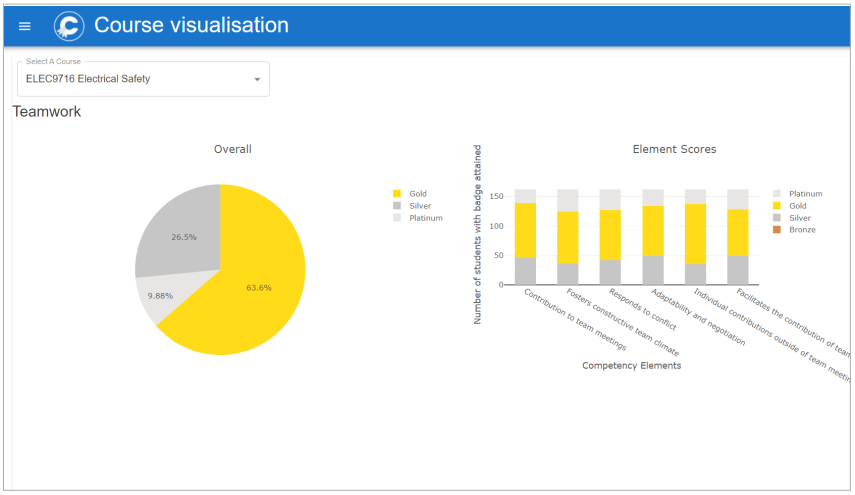
Credentialate has been designed to assess, monitor, promote and validate learners' attainment of signature (soft) skills, supporting the transition from learner to earner.

Credentialate is a secure, configurable platform that assesses and tracks attainment of competencies and issues micro-credentials to students.

Credentialate extracts data from LMS environments using an automatic extraction process, then assesses the extracted competency scores against an institution's rubrics to determine students' levels of mastery. Micro-credentials can then be automatically issued to students using Credentialate's integration with badge generation tools. Clear validation of each student's achievement is evidenced within the badge by their detailed performance against the rubric.

9/10 of the most important skills for employees to have are soft skills

- Pearson Global Employer Research, 2019



Evaluate

You've got student performance data in your LMS - why not use it! Credentialate's rubric-driven approach enables institutions to automatically extract data from existing platforms.

Credentialate

We can make up words, and anyone can make up badges! The platform supports the rapid issuing of badges either individually or en masse, through badge issuing platforms such as Badgr.

Validate

Issuing badges is the easy part! Credentialate's strength is in its ability to surface the evidence of a learner's achievements and present this in a consumable format.

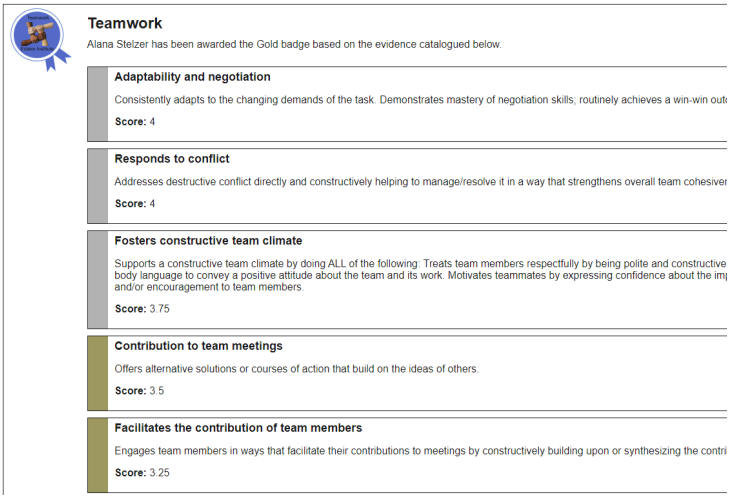
The power of evidence

Extending on Credentialate's ability to automatically extract rubric-based data from the LMS and then rapidly issue industry-compliant badges, Credentialate's key strength is its ability to surface key evidence.

The current limitation of micro-credentials is the lack of evidence that is available automatically on attainment of a badge. Credentialate meets this market need through a detailed evidence page that is linked to the issued badge, enabling both qualitative and quantitative evidence to be surfaced. Such evidence can then be shared with others (such as employers) at the discretion of the learner.



Meeting the needs of stakeholders

Credentialate has been carefully designed to benefit the diverse range of stakeholders at your institution.

Instructors

- Extracts data from LMS assignment and group tools - eliminating the need to learn a new system
- Flexible rubric model supporting peer and academic assessment of student performance
- Elimination of manual steps via automated extraction of student results

Course Convenors / Administrators

- Ability to define multiple tiers of mastery per competency and align rubrics to industry standards, institutional graduate attributes or custom models
- Systematised evaluation of learners' progress for achievement of mastery/competency, including rich analytics and visualisations
- Standards-based output using the IMS Comprehensive Learner Record (CLR) format

Learners

- Attainment of meaningful, personalised micro-credentials backed by evidence
- Control over micro-credential visibility

Employers

- Meaningful, validated credentials, supported by compelling evidence detailing the student's performance

About Edalex

Edalex delivers a range of services for the education sector. With deep expertise in the educational technology sector, and strong engagement with local educational institutions, Edalex delivers proven results for both clients and partners. In addition to Credentialate, Edalex is the official Asia Pacific services and support provider for the open-source repository openEQUELLA, and is the ANZ partner for both the analytics-driven student communication platform, Full Measure Education, and Interfolio's Faculty Information System.
