

# Assess and strengthen attention in early childhood with TALi.

## Two ground-breaking TALi technologies.

### 1 TALi DETECT

Digital game-based tool designed to measure key attention skills.

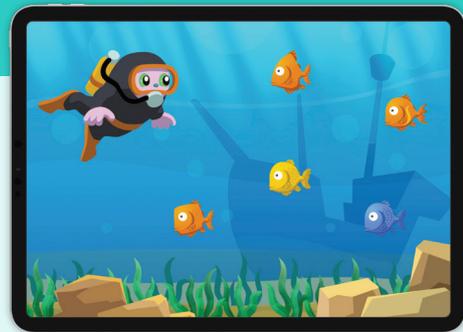

TALi DETECT is one of the first digital early childhood assessment tools designed to flag and support children who may be affected by attention deficits. The tool helps assess whether a child may benefit from professional support or intervention for improving their attention skills.

Available free in the TALi Assessment Package

### 2 TALi TRAIN

Intensive training program designed to improve attention in children.

TALi TRAIN is an attention training program, leveraging 25 years of research. The program strengthens attention skills in five weeks to deliver measurable and meaningful improvements. It's a fun, engaging and evidence-based approach to early intervention that is able to make lasting changes in attention.

Available in the TALi Premium Package

# How the TALi platform works.

## 1 TALi DETECT

Flag children who may be experiencing attention vulnerabilities with TALi Assessment.

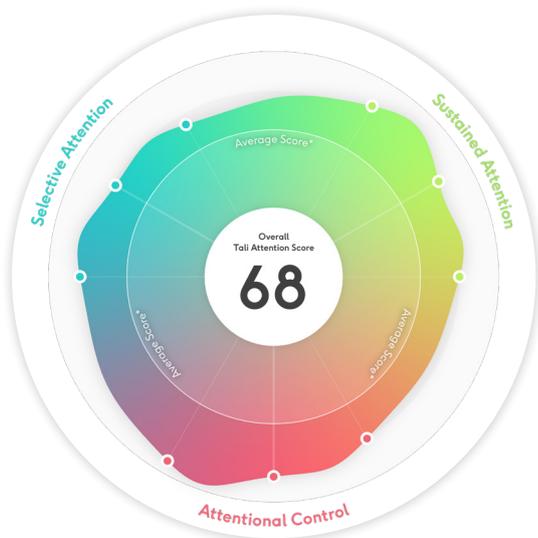

### Fun, engaging & easy to administrate.

The TALi DETECT Assessment can be completed in one 20-minute session. The child will complete seven fun and engaging game-based exercises, with their performance forming the basis of their attention report.

### Comprehensive attention report.

After completing TALi DETECT, you'll receive a detailed report for each child, outlining their performance in each of the seven exercises of TALi DETECT. The report identifies the overall attentional development of the child, as well as the child's areas of strengths and weaknesses.

### Unique TALi Attention Profile for every child.

As part of the report, each child will receive their own unique TALi Attention Profile. Here, the child's performance is plotted against what is considered to be an average result.

Children who perform below average in the TALi DETECT program are likely to be experiencing attention vulnerabilities. For these children, it is recommended that they continue to stage two of the TALi platform.

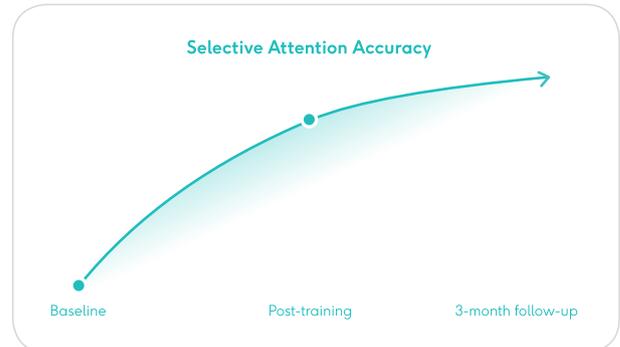

## 2 TALi TRAIN

Support children who have been flagged as vulnerable with our TALi Premium Package.

### Game-based attention training.

Strengthen attention in early childhood with TALi TRAIN, our clinically-validated, five-week intensive training program.

### Clinically proven to improve attention.

Validated by Gold Standard clinical trials, TALi TRAIN is proven to improve selective attention accuracy, as well as numeracy skills.

Upon completion of TALi TRAIN:

**93% of parents noted improvements in one or more symptoms of inattentive and hyperactive behaviour in their child.**

“ When we first started playing TALi TRAIN, Jake really loved it and was always keen to play. Weeks three & four were a bit harder to get him motivated but once he started he was fine. What I loved most about TALi TRAIN was how much it would calm him down after school, which helped with his behaviour in the evening. Jake flourished at school during the five weeks of TALi TRAIN and was often given ‘star of the day’ in class because of how attentive he was being. Overall, I would highly recommend the program to any school age child struggling to pay attention.

**Deana — Parent of Jake, a 7 year-old with ADHD**

“ As a psychologist, it’s important that all interventions that we endorse are evidence-based. TALi is scientifically proven to be effective, and this gives me great confidence and trust in recommending TALi. Parents are reporting overall improvements in their child’s attention behaviours.

**Maria Karefilakis —  
Clinic Director, Kare Psychology**
